## Product Description

**Product Description:**

Product Introduction

for more products please visit us on adldentalab.com

The Implant bar and Locator Attachment product is engineered to withstand repeated sterilization cycles using the autoclave method. This sterilization method involves subjecting the product to high-pressure steam, which eliminates harmful microorganisms and ensures that the product is safe for use in dental procedures. This feature makes the product easy to maintain and ensures that it remains in excellent condition throughout its lifespan.

The surface treatment of the Implant bar and Locator Attachment is sandblasting, which enhances its durability and longevity. The sandblasting process involves using high-pressure air to blast abrasive particles onto the surface of the product, which creates a rough and textured surface that is resistant to wear and tear. This feature ensures that the Implant bar and Locator Attachment can withstand the stresses and strains of daily use, making it an ideal solution for dental implant procedures.

The Implant bar and Locator Attachment product features a Locator attachment type, which allows for easy and convenient attachment to the implant-supported prosthesis. The Locator attachment is a premium attachment system that provides a secure and stable fit, which is essential for the success of dental implant procedures. The Implant bar with Locator Attachment ensures a precise fit with the implant-supported prosthesis, which enhances the overall functionality and comfort of the prosthesis.

The Implant bar and Locator Attachment product also comes with a milled implant bar, which is designed to provide a precise and accurate fit with the implant-supported prosthesis. The milled implant bar is a high-quality component that is precision-engineered to ensure a perfect fit with the Locator attachment. This feature ensures that the Implant bar with Locator Attachment provides a stable and comfortable fit, which enhances the overall functionality and performance of the implant-supported prosthesis.

In summary, the Implant bar and Locator Attachment product is a premium solution for dental implant procedures. It features a secure Internal Hex connection type, an elegant silver and gold color combination, and a durable sandblasted surface treatment. The product is easy to maintain and can withstand repeated sterilization cycles using the autoclave method. The Locator attachment type ensures a precise fit with the implant-supported prosthesis, while the milled implant bar provides a stable and comfortable fit. The Implant bar with Locator Attachment is an excellent choice for dental professionals looking for a reliable and efficient solution for dental implant procedures.

## Features:

**Product Name: Implant bar and Locator Attachment and over denture**
**Attachment Type: LOCATOR**
**Number Of Attachments: 2 Or More**
**Connection Type: Internal Hex**
**Benefits:**
**Provides secure LOCATOR Implant Attachment**
**Allows for easy removal of attachments for cleaning and maintenance**
**Surface treatment ensures durability and long-lasting use**
**Can be sterilized using autoclave for optimal hygiene**
**Internal Hex connection type ensures stability and precision**

## Technical Parameters:

## Applications:

The Implant bar and Locator Attachment product is suitable for use in various application occasions and scenarios due to its high quality and durability. The product is ideal for patients who have lost multiple teeth and require implant-supported overdentures. The Locator Attachment with milled implant bar can be used for edentulous arches, partial edentulous arches, and cases with limited vertical space. The Implant bar with Locator Attachment is suitable for cases with adequate vertical space.

The Implant bar and Locator Attachment product is available in different packaging options, including plastic bags and boxes. The delivery time for this product is 72 hours, and the payment terms include Paypal or T/T. The minimum order quantity and the price for this product are negotiable. ADL has a supply ability of 630 technicians, ensuring that the product is readily available to meet customer demand.

The Implant bar and Locator Attachment product is an innovative product that offers a reliable and easy-to-use solution for implant-supported overdentures. The product is made of high-quality titanium, making it sturdy and durable, ensuring that it lasts for a long time. The Implant bar and Locator Attachment product is an excellent choice for dental professionals who want to provide their patients with an effective and efficient way to restore their oral health.
