## Product Description

### Stainless Steel Quad Helix Appliance for Effective Orthodontic Treatment in Children and Adolescents

#### Product Description:

The Quad-Helix Appliance is a type of orthodontic appliance that is designed to help orthodontists treat a wide range of dental conditions. It is a fixed appliance that is attached to the patient's teeth and is used to expand and rotate the palatal arch. This appliance is an essential tool for orthodontists who need to widen the patient's jaw, especially in cases where there is a narrow palate.

The Quad-Helix Appliance is designed with the quad helix expander, which is a type of screw that can be adjusted with a key. The adjustable feature of the Quad-Helix Appliance makes it easier for orthodontists to customize the appliance to fit the patient's specific needs. This feature also helps the orthodontist to control the amount of force applied to the teeth, allowing for a more gradual and comfortable expansion of the palate.

The Quad-Helix Appliance is widely recognized as a reliable and effective tool for orthodontic treatment. Its design and functionality make it an excellent option for patients who need to expand their palatal arch. It is also a popular choice for orthodontists who prefer using fixed appliances for their patients.

If you are looking for an effective orthodontic appliance that can help expand and rotate your palatal arch, the Quad-Helix Appliance is an excellent option. It is made using high-quality stainless steel, and its adjustable feature makes it easier for orthodontists to customize the appliance to fit your specific needs.

#### Features:

**Product Name:** Quad-Helix Appliance

**Function:** Expansion and rotation of palatal arch

**Activation:** Adjustable with key

**Design:** Quad-Helix

**Material:** Stainless Steel

**Usage:** Fixed appliance

#### Technical Parameters:

Attribute	Description
Product Name	Quad-Helix Appliance
Compatibility	Compatible with brackets and bands
Age Range	Children and adolescents
Treatment	Orthodontic treatment
Design	Quad-Helix
Usage	Fixed appliance
Function	Expansion and rotation of palatal arch
Indications	Crowding, crossbite, palatal expansion
Activation	Adjustable with key
Material	Stainless steel
Placement	Bonded to teeth

#### Applications:

The Quad-Helix Appliance is an effective product that is used in various occasions and scenarios such as:

**Dental Clinics:** The Quad-Helix Appliance is commonly used in dental clinics for orthodontic treatment. The product is certified with ISO, CE, and FDA, which ensures that it meets the highest quality standards.

**Schools:** The Quad-Helix Appliance is popular among school-age children who require orthodontic treatment. The appliance can be used to correct a range of dental issues, including overcrowding, crossbite, and palatal expansion.

**Hospitals:** The Quad-Helix Appliance is also used in hospitals for orthodontic treatment. The product is made of high-quality stainless steel, which ensures its durability and effectiveness.

**Private Clinics:** Private clinics also use the Quad-Helix Appliance for orthodontic treatment. The product is highly adjustable with a key, which makes it easy to customize to the individual needs of the patient.

**Dental Laboratories:** The Quad-Helix Appliance is also used in dental laboratories for the manufacturing of orthodontic appliances. The product is made in Shenzhen, China, which is known for its high-quality manufacturing industry.

The Quad-Helix Appliance is shipped with plastic bags and boxes, and the delivery time is 72 hours. The payment terms are negotiable and can be made through Paypal or T/T. The minimum order quantity is also negotiable, and the price can be negotiated as well.

ADL has over 630 technicians who are highly skilled in the manufacture and distribution of the Quad-Helix Appliance. The product is certified with ISO, CE, and FDA, which ensures its quality and effectiveness. The Quad-Helix Appliance is an essential product in the field of orthodontic treatment, and it has proven to be effective in correcting dental issues such as crowding, crossbite, and palatal expansion.
