#### Basic Information

- Place of Origin: China
- Brand Name: ADL
- Certification: ISO/CE/FDA
- Minimum Order Quantity: Negotiable
- Price: Negotiable
- Packaging Details: Plastic bags and box
- Delivery Time: 72 Hours
- Payment Terms: Paypal or T/T
- Supply Ability: 630 Technicians

#### Product Specification

- Flexural Strength: 360 MPa
- Feature: Hypoallergenic & Biocompatible
- Shade: A1/A2/A3/A3.5...16 Shades
- Precision Of Margins: Accurate
- Biocompatibility: Safe And Non-toxic Materials
- Resistance To Chipping: High
- Strength And Durability: High
- Customer Service: 7\*24H

### Our Pr

#### Product Description

##### Product Description:

The Crown and Bridge Dental Lab product is an advanced dental restoration solution designed to meet the highest standards of durability, precision, and esthetics. Specially crafted using porcelain fused to zirconia, this product offers a perfect combination of strength and beauty, making it an ideal choice for both patients and dental professionals seeking reliable and visually appealing dental restorations. One of the standout features of this Crown and Bridge Dental Lab product is its exceptional durability. Constructed with premium materials and utilizing the innovative porcelain fused to zirconia technique, these crowns and bridges are long-lasting and highly wear-resistant. This ensures that the restorations can withstand the rigors of daily chewing and biting without compromising their structural integrity. The enhanced durability reduces the need for frequent replacements or repairs, providing patients with a dependable solution that supports oral health over an extended period.

Precision of margins is a critical factor in the success of any dental restoration, and this product excels in this aspect. The manufacturing process is meticulously controlled to ensure that the margins of the crowns and bridges are accurate and fit perfectly with the natural tooth structure. This accuracy minimizes the risk of gaps or misfits that could lead to bacterial infiltration or discomfort. The precise margin fit enhances the longevity of the restoration and contributes to maintaining the health of the surrounding gums and teeth.

Appearance is equally important in dental restorations, and the Crown and Bridge Dental Lab product delivers outstanding natural-looking results. Utilizing high-quality porcelain fused to zirconia, the restorations exhibit a high esthetic quality that closely mimics the translucency and color of natural teeth. This makes the crowns and bridges virtually indistinguishable from real teeth, providing patients with a confident and beautiful smile. The high esthetic appeal of these restorations ensures patient satisfaction and improves overall dental aesthetics.

In addition to the superior material properties, the chemical solubility of this product is impressively low, with a value of less than 100  $\mu\text{g}/\text{mm}^2$ . This low chemical solubility means that the restorations are highly resistant to degradation from exposure to oral fluids and chemicals, further enhancing their durability and performance. The resistance to chemical breakdown helps maintain the integrity and appearance of the crowns and bridges over time, even in challenging oral environments.

Understanding the importance of timely delivery in dental treatments, the Crown and Bridge Dental Lab product is shipped via reliable and fast carriers including DHL, UPS, and FEDEX. This ensures that dental labs and clinics receive their orders promptly, allowing for efficient workflow and timely patient care. The dependable shipping options provide peace of mind, knowing that the products will arrive securely and on schedule.

In summary, the Crown and Bridge Dental Lab product combining porcelain fused to zirconia technology offers an unparalleled blend of durability, precision, and natural appearance. Its long-lasting and wear-resistant nature, coupled with accurate margins and high esthetic quality, makes it a superior choice for dental restorations. The low chemical solubility enhances its longevity, while the reliable shipping options facilitate smooth and timely delivery. For dental professionals aiming to provide their patients with the best in dental crowns and bridges, this product represents a cutting-edge solution that meets and exceeds expectations.

## Features:

Product Name: Crown And Bridge Dental Lab

## Applications:

The ADL Crown and Bridge Dental Lab product is designed to meet the diverse needs of dental professionals and laboratories seeking high-quality dental restorations. Originating from China, ADL brings a trusted brand that complies with international standards, holding ISO, CE, and FDA certifications. This ensures that every crown and bridge produced is crafted with safe and non-toxic materials, guaranteeing biocompatibility and patient safety.

One of the primary application occasions for ADL's dental laboratory services is the fabrication of porcelain fused to zirconia restorations. These restorations combine the strength of zirconia with the aesthetic appeal of porcelain, offering a highly aesthetic and natural appearance that meets the demands of both patients and clinicians. The layered zirconia technique used by ADL further enhances the lifelike translucency and shade matching, available in a wide range of 16 shades including A1, A2, A3, and A3.5, ensuring seamless integration with natural teeth.

ADL's crown and bridge services are ideal for various clinical scenarios such as single-unit crowns, multi-unit bridges, and implant-supported prosthetics. Whether restoring anterior teeth where aesthetics are paramount or posterior teeth requiring durability, the porcelain fused to zirconia solutions provide an excellent balance between strength and beauty. Dentists and dental labs can rely on ADL for quick turnaround times, with delivery typically within 72 hours, supported by efficient shipping options through DHL, UPS, or FEDEX. The flexible minimum order quantity and negotiable pricing make ADL's dental lab services accessible for both small and large-scale dental practices. Payment terms are accommodating, accepting Paypal or T/T, which facilitates smooth transactions worldwide. The product packaging ensures safety during transit, using plastic bags and boxes to protect each restoration.

In summary, ADL's Crown and Bridge Dental Lab product is perfect for dental professionals seeking reliable, highly aesthetic, and natural-looking restorations using advanced porcelain fused to zirconia and layered zirconia techniques. With a supply ability of 630 technicians, ADL can efficiently cater to diverse dental laboratory needs, ensuring quality, safety, and timely delivery in every order.
